

## How to Disable the Members Request Button

1. On the page, click “Manage”
2. Using the left navigation menu, click on “Customize” and then “Users” (see screenshot below)
3. Under the “Membership Requirements” tab, locate the “Join Button” control (see screenshot below)
4. Toggle the “Join Button” control to the “disabled” setting.
5. This should remove the membership request button from the page.

The screenshot shows the 'Customize' menu on the left with 'Users' selected. The main content area is titled 'Membership Requirements' and includes a 'Join Button' control set to 'Disabled'. Other settings include 'Membership Approval Needed' (Yes) and 'Require Email' (No). A warning message states: 'Setting "Membership Approval Needed" or "Require Email" to Yes will also make them required for all 4 subgroups.'

Membership Requirements   Membership Fees   Membership Request Fields   Administrative Fields

### Membership Requirements

People may become members to view private opportunities, join email lists et al. Additionally it makes it easier for administrators to contact members

⚠ Setting "Membership Approval Needed" or "Require Email" to Yes will also make them required for all 4 subgroups.

**Join Button**    
If disabled, users can only join the group with the link above and the button to join the group will be disabled.

**Membership Approval Needed**    
Yes

**Require Email**    
No   
If this is set to yes, users can only join if they have the same email domain as listed below

**Add to Subgroups**    
When someone joins your group, you can automatically make them a member of any set of subgroups that you want. Note that this is not retroactive nor does it block them from leaving the subgroups
